Purpose of the PTAC

- To provide **technical advice** regarding model development, calibration and validation, including possible access to datasets that may be used in the process.
- To provide input regarding the **communication of research findings** and uncertainty associated with them.
- To provide **advice about possible scenarios** to be generated and tested from the BREE Integrated Assessment Model (IAM), as well as the land use, hydrology, climate, governance and economic models that are to be wrapped into it.
- To provide advice about the **development of actionable, decision-support tools to inform water quality** in the face of changing frequencies and intensities of extreme events in the study areas.

New addition?

- To serve as informants in digital field experiments and/or focus groups.
